

Increase information exchange throughout the company

- ▶ Produce reports from user data
- ▶ Use multiple data sources
- ▶ Users can produce tailored reports
- ▶ Design reports to suit you
- ▶ Spotlight information to highlight specific conditions
- ▶ Set reports to run automatically at off peak times
- ▶ Use exception reporting
- ▶ Graphical formats for reports
- ▶ Easy print and email facilities
- ▶ Be proactive by attaching triggers to business events
- ▶ Ready to use 'out of the box'

The IcanCiT reporting tools encourage users to share information and to produce meaningful, useful reports.

An award winning business intelligence tool, IcanCiT is aimed at general business users and provides straightforward, intuitive interfaces.

Common interface

Integrate reporting requirements across your applications for ease of access with a common interface.

Use multiple data sources to feed data into IcanCiT and focus your information.

For example, you might use Microsoft Excel, Microsoft Access, and Answer Enterprise together.

Manipulate and modify reports

Users can interact with the system to manipulate and modify reports.

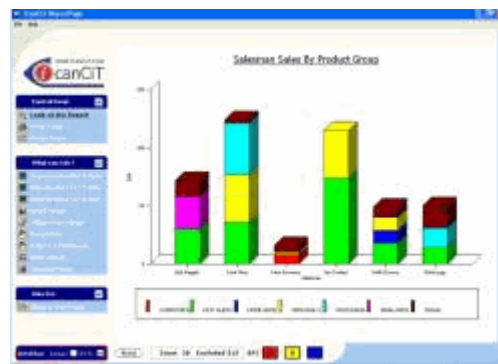

Each user can produce tailored reports to focus the information they want in a format they prefer.

Information can be 'spotlighted' to highlight specific conditions and filtered to only show data relevant to the individual.

This flexibility improves the timelines of mission-critical information and also enhances workflow.

Report designs can be adapted to suit company use or new reports can be created as required.

Attach exception reports to the scheduler to only see a report if a user-defined condition is true. Focused information only when you need it will help to save time and resources.

Running and distributing reports

Set reports to run automatically.

For example, reports could be run overnight at off peak times and results distributed via email for users to view at the start of a working day. This will save time each day if reports were to be run every morning.

Reports can be run in batches and are easily controlled by a central administrator. They can be run at set times each day, week, month.

Users can distribute reports via printer, email, and Web posting.

Alternatively reports can be saved in a variety of standard formats like txt, csv and automatically packaged and distributed to a larger community including the web.

Graphical formats are available for all reports.

Event reporting

Attach triggers to business processes to discover exactly what is happening and act immediately if required.

Be proactive and not reactive to help increase profitability.

A variety of interfaces communicate the occurrence of an event via email, SMS and the web to users that need to know.

Ready to use

IcanCiT comes ready to use 'out of the box' for several commercial applications including Answer Enterprise.

Pre-defined report collections are available for Answer Enterprise or you can import existing SQL reports.

ReportBooks available for Answer Enterprise

- ▶ Accounts Payable Activity
- ▶ Accounts Payable Vendor Balances By Currency
- ▶ Accounts Receivable Activity
